See footnotes on next page.

TABLE 6. Share of Value of Shipments of Each Class of Product Accounted for by the 4, 8, 20, and 50 Largest Companies: 1972 and Earlier Years—Continued

(Footnotes for table 6)

- Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.
(S) Withheld because the data did not meet publication standards.

¹Product classes (5-digit codes) and product groups (4-digit codes) are assigned to the industry to which they are primary. Products which are primary to 2 or more industries are split according to the industry code of the establishment producing them.

²Represents for each product class or group the total value shipped by all producers in all industries. The 4-digit product group represents the total shipments by all producers of the products assigned the code with the same first 4 digits. For products primary to more than 1 industry, only the amount produced by plants with the same industry code is included. Thus, the total value of products of meatpacking plants includes all fresh meats but only those prepared meats (20116, 20117, 20118) processed in plants classified in industry 2011. It does not include such products made elsewhere (20136, 20137, 20138).

³Company affiliation is determined from census reports and public records. The value of shipments of products falling within each 5-digit class or 4-digit group was aggregated for plants under common ownership and company totals derived to determine the largest producers. Thus, the same company may contribute to total value of shipments in more than 1 product class or group.

⁴By definition, this product class is limited to the products produced by establishments classified in the industry having the same code as the first 4 digits of the product code. Appreciable amounts are also made in the other product classes referred to in the product description. The total value of shipments and the percent accounted for by large companies shown here are based exclusively on the products primary to this industry. See table 7 for the value of such products shipped from all establishments.

⁵Comparability of this industry has changed slightly as a result of the 1972 SIC revision. The change is estimated to be less than 3 percent of the total value of shipments. 1967 and earlier data are tabulated under the old definition.

⁶For 1972, product class 20151 was reclassified as product classes 20161 and 20162.

⁷1963 and 1958 not completely comparable. 1963 figures include \$10,123 thousand of packaged poultry (boned and frozen) not canned. Significant amounts of this item may have been included in other products of the industry in 1963. No separate figures are available for 1958.

⁸For 1963, the formerly separate industries 2022, Natural Cheese, and 2025, Processed Cheese, were combined into one industry 2022, Natural and Process Cheese. In the revision, individual products were redefined from the 1958 product class 20220, Natural cheese, into the 1963 product classes 20221 and 20222, so that 1958 concentration ratios for these classes could not be computed.

⁹Value of production.

¹⁰Individual products primary to other industries were included in the published totals of this product class in order to avoid disclosing figures for individual companies. Percentage share of this total accounted for by large companies is not available.

¹¹Establishments in Alaska and Hawaii are important producers of these products. Recomputed figures cannot be shown for the 4, 8, 20, and 50 largest companies prior to 1963 without disclosing the operations of individual companies in Alaska and Hawaii.

¹²Revised concentration ratios not available because corrections to individual records could not be identified.

¹³The data for product class 20370, Frozen fruits and vegetables, n.s.k., are included with product class 20380, Frozen specialties, n.s.k.

¹⁴For 1972, product class 20373 was reclassified as product classes 20381, 20382, and 20383.

¹⁵The composition of this product class was redefined compared to 1958. Where possible corrections were made to the 1958 aggregate but concentration ratios could not be recalculated.

¹⁶The composition of this product class was redefined compared to 1963. Where possible, corrections were made to the 1963 aggregate, but concentration ratios are not available for prior periods.

¹⁷Comparable data are not available for 1967 and earlier years due to a major revision in the 1972 SIC system.

¹⁸Includes unknown amounts of pet food manufactures.

¹⁹For 1972, product class 20511 was reclassified as product classes 20511 and 20512.

²⁰For 1972, product class 20716 was reclassified as product classes 20657 and 20658.

²¹For 1963 the formerly separate industries 2094, Grease and Tallow, and 2095, Animal and Marine Oil Products, including foats, were combined as industry 2094, Animal and Marine Fats and Oils, including grease and tallow. The 1958 value of shipments figures for industries 2094 and 2095 have been combined and the shares accounted for by the 4 and 8 largest companies recomputed on a basis comparable to 1963.

²²For 1972, product class 20820 was reclassified as product classes 20821, 20822, 20823, 20824, and 20820. The new 4-digit product group 2082- is comparable to the old 5-digit product class 20820 and the prior years data are shown for both classes.

²³The total value of shipments figures contain substantial duplication resulting from the fact that some of the products shipped are used as materials, parts or components in the manufacture of other products in the same product class or product group. The effect of this duplication on the concentration ratios is unknown.

²⁴For 1972, product class 20361 was reclassified as product classes 20923 and 20924.

²⁵For 1963 industry 2099, Food Preparations, N.E.C., was redefined to exclude product class 20995. Roasted coffee, which was made a separate industry 2095. Concentration ratios for industry 2099 are not available for 1958 on a revised basis.

²⁶For 1972, product class 20999, Other food preparations, n.e.c., was reclassified as product class 20995, Tea in consumer packages, and 20999, Other food preparations, n.e.c. Data for 1972 are not comparable to prior years data due to the revision in the SIC codes.

²⁷By definition, this product class includes only products produced by establishments classified in the same industry but separate figures cannot be shown. Appreciable amounts are also made in the other product classes referred to in the product description. See table 7 for value of such products shipped from all establishments.

²⁸Ratios for the 20 and 50 largest companies are not available.

²⁹1963, value of shipments. 1958 and earlier, value of production.

³⁰The 1963 ratios include receipts for contract and commission work and are comparable with the 1967 ratios.

³¹The 1972 ratios exclude receipts for contract and commission work and therefore are not comparable to the 1967 ratios; however, they are comparable to the 1958 and 1954 ratios.

³²For 1972, product class 22562 was reclassified as product classes 22571, 22572, 22573, 22574, and 22576.

³³For 1972, product class 22569 was reclassified as product classes 22579 and 22589.

³⁴For 1972, product class 22561 was reclassified as product classes 22581, 22582, 22583, and 22584.

³⁵Excludes shipments by establishments producing filament yarn and classified in industries 2823, Cellulosic Manmade Fibers, and 2824, Organic Fibers, Noncellulosic.

³⁶For 1972, product class 22991 was reclassified as product classes 22971 and 22972.

³⁷Includes some duplication since some nonwoven ribbons are made from purchased nonwoven fabrics.

³⁸In 1958, data for bonded fiber fabrics, product class 22991, are included with textile goods, n.s.k., product class 22990. This combination was made because the data were unsatisfactorily reported due to problems associated with the product definitions.

³⁹Data for 1967 are not strictly comparable with 1963 because of product misclassification. Approximately 20 to 75 percent of the 1967 shipments data for product class 23962 were included in other product classes in 1963. Revised figures for 1963 are not available.

⁴⁰Excludes commission receipts for Schiffli machine embroidering on materials owned by others. This amounted to \$13.8 million in 1967 and \$21.0 million in 1963. The 1967 total included \$24.9 million which was not differentiated between the value of product sales and receipts for commission work. The comparable figure for 1963 was \$5.5 million.

⁴¹Comparable data are not available for prior years due to a significant revision to the SIC system. Product classes 24211 and 24212, were formed by regrouping 1967 product classes 24211, Rough lumber and sawed ties, and 24212, Dressed lumber.

⁴²Wood chips were reclassified in 1967 from industry 2429, Special Product Sawmills, N.E.C., to industry 2421.

⁴³Comparable data are not available for prior years due to a major revision in the SIC system. This product group now includes wood frames for household furniture which previously was identified as product class 25126.

⁴⁴Includes shipments of wood chips which in 1967 were reclassified to product class 24215.

⁴⁵Comparable data are not available for prior years due to a significant revision to the 1972 SIC system. For 1972, 1967 product class 24317, Cabinet work, to be built-in, was reclassified to industry 2434, Wood Kitchen Cabinets.

⁴⁶For 1972, 1967 product class 24316, Finished wood mouldings, was reclassified as product classes 24316 and 24317.

⁴⁷For 1972, industry 2434 was formed by combining 1967 product classes 24317, Cabinet work, to be built in, and 25114, Kitchen cabinets, wood. Comparable data are not available for 1967 and earlier years at the product group level.

⁴⁸For 1972, 1967 product class 24317, Cabinet work, to be built-in, was reclassified as product classes 24342 and 24343. In addition, product class 24343 was expanded to include stock line cabinets.

⁴⁹For 1972, industries 2435 and 2436 were formed by splitting old industry 2432, Veneer and Plywood. Comparable data are not available for 1967 and earlier years at the product group level.

TABLE 6. Share of Value of Shipments of Each Class of Product Accounted for by the 4, 8, 20, and 50 Largest Companies: 1972 and Earlier Years—Continued

(Footnotes for table 6--Continued)

- ⁵⁰For 1972, 1967 product class 24324 was reclassified as product classes 24352, 24353, and 24363.
- ⁵¹Comparable data are not available for 1967 and earlier years due to a major revision in the 1972 SIC system. All products now classified in industry 2439 were formerly part of old industry 2433. The balance of old industry 2433 is now classified as industry 2452.
- ⁵²Comparable data for prior years are not available due to a major revision in the 1972 SIC system. This product group was previously identified as product classes 24420, 24430, and 24450.
- ⁵³Comparable data for prior years are not available due to a major revision in the 1972 SIC system. Industry 2451 was previously a part of product class 37910, Trailer coaches, under industry 3791.
- ⁵⁴Comparable data for prior years are not available due to a major revision in the 1972 SIC system. All products now classified in this industry were formerly part of old industry 2433, Prefabricated Wood Structures. The balance of old industry 2433 is now classified as 2439.
- ⁵⁵Comparable data are not available for 1967 and earlier years due to a significant revision in the 1972 SIC system. This product group as now constituted excludes pallets and skids (1967 product class 24992) and particleboard (1967 product class 24993) which were reclassified to product classes 24480 and 24920, respectively.
- ⁵⁶Comparable data are not available for 1967 and earlier years due to a significant revision in the 1972 SIC system. This product group as now constituted excludes product class 25111 and part of product class 25112 which were reclassified as 25170, and product class 25114 which was reclassified as product class 24341.
- ⁵⁷Comparability of this product class has changed for 1972 due to the reclassification of sewing machine cabinets to product class 25170. The change is estimated to be approximately 11 percent of the total value of shipments.
- ⁵⁸Comparability of this product group has changed for 1972 due to the reclassification of wood frames for household furniture (1967 product class 25126) to industry 2426. The change is estimated to be less than 10 percent of the total value of shipments.
- ⁵⁹Comparable data are not available for 1967 and earlier years due to a major revision in the 1972 SIC system. This product class was previously classified under industry 2511 as product class 25111 and part of product class 25112.
- ⁶⁰For 1972, product class 25410, Wood partitions, shelving, lockers, and office and store fixtures was reclassified as product classes 25411, 25412, and 25413.
- ⁶¹For 1972, product class 25420, Metal partitions, shelving, lockers, and office and store fixtures was reclassified as product classes 25421, 25422, 25423, and 25424.
- ⁶²For 1972, the 1967 product classes 26314, 26315, 26316, and 26317 were combined and reclassified as product class 26314.
- ⁶³Comparable data are not available for prior years due to a significant revision to the SIC system. Product classes 26417 and 26418 were formed by regrouping 1967 product classes 26415 and 26416.
- ⁶⁴Comparability of this product class has changed slightly as a result of the 1972 SIC revision. This product class now includes paper disposable diapers which previously were included with nonwoven disposable diapers in industry 2399.
- ⁶⁵For 1972, product class 26491 was reclassified as industry 2648 and split into product classes 26481 and 26482.
- ⁶⁶Comparable data are not available for prior years due to a major revision in the SIC system. This product group now includes wallpaper (old product class 26440) and excludes stationery products (old product class 26491) which were reclassified as industry 2648.
- ⁶⁷This product class was previously identified as product class 27312, Subscription reference books, hardbound. Since the definition was expanded to include other reference books such as dictionaries, thesauruses, and atlases, 1972 data are not completely comparable to data for 1967 and earlier years.
- ⁶⁸For 1972, product class 27316 was reclassified as product classes 27318 and 27319.
- ⁶⁹For 1972, product class 27321 was reclassified as product classes 27321, 27322, 27323, and 27324.
- ⁷⁰For 1972, product class 27322 was reclassified as product classes 27325, 27326, and 27327.
- ⁷¹Comparability of this product group has changed slightly as a result of the 1972 SIC revision. For 1972, product classes 27417 and 27518 were reclassified as industry 2754. The change is estimated to be approximately 13 percent of the total value of shipments. 1967 and earlier data are tabulated under the old definition.
- ⁷²Comparability of this product group has changed due to the reclassification of product class 27527 to industry 2795. The change is estimated to be approximately 5 percent of the total value of shipments. 1967 and earlier data are tabulated under the old definition.
- ⁷³For 1972, industry 2754 was formed by combining old product classes 27517 and 27518. Comparable data are not available for 1967 and earlier years.
- ⁷⁴For 1972, product class 27518 was reclassified as product classes 27542, 27543, 27544, and 27545.
- ⁷⁵Ratios not available. In the mechanical conversion to the revised product codes based on the 1957 SIC system, the products of a significant number of small establishments were not properly changed from industry 2782. Although the total shipments have been corrected, it was not feasible to correct the individual figures for small establishments.
- ⁷⁶For 1972, product class 27611 was reclassified as product classes 27615 and 27617.
- ⁷⁷For 1972, product class 27527 was reclassified as product classes 27951 and 27952.
- ⁷⁸Comparable data are not available for 1967 and earlier years due to a major revision in the 1972 SIC system. The 1972 revisions transferred the manufacture of household bleaches to industry 2842; the manufacture of synthetic ammonia, nitric acid, and ammonium compounds to industry 2873; and the manufacture of phosphoric acid to industry 2874.
- ⁷⁹Comparable data are not available for 1967 and earlier years due to a major revision in the 1972 SIC system. The effect of phosphoric acid formerly classified in product class 28194, shifting to product class 28741 exceeds 15 percent of the value of shipments.
- ⁸⁰Aluminum oxide and other aluminum compounds data are combined for 1967 and earlier years.
- ⁸¹Comparability of this product class has changed slightly as a result of the 1972 SIC revision. Calcium hypochlorite (high-test) and other industrial bleaches were transferred from old product class 28192, Inorganic industrial and household bleaching compounds, to product class 28199. The change is estimated to be less than 15 percent of the total value of shipments. 1967 and earlier years are tabulated under the old definition.
- ⁸²Comparable data are not available for 1967 and earlier years due to a significant revision in the 1972 SIC system. The 1972 revisions transferred the manufacture of unsupported plastics film, sheets, rods, and tubes; regenerated cellulosic products, except rayon; and custom compounded purchased resins to industry 3079. In addition, the production of synthetic resin adhesives, from resins manufactures in the same establishment, was transferred to industry 2891.
- ⁸³Comparability of this product class has changed slightly as a result of the 1972 SIC revision. Data for synthetic resins for protective coatings (1967 product class 28216) are now included in product classes 28213 and 28214. The change is estimated to be less than 15 percent of the total value of shipments. 1967 and earlier data are tabulated under the old definition.
- ⁸⁴A major revision in the classification of products classified in industry 2834 was introduced in 1963 and, therefore, prior years' data are not available at this product level.
- ⁸⁵Comparable data are not available for 1967 and earlier years due to a major revision in the 1972 SIC system for this product class. The 1972 definition breaks nonhousehold soaps and detergents (28411) and household detergents (28412) into separate product classes. In 1967 and earlier years, soaps and detergents were defined by type: Alkaline, soap, and synthetic organic detergents.
- ⁸⁶Data prior to 1963 includes both natural and synthetic glycerine.
- ⁸⁷Comparable data are not available for 1967 and earlier years at the product group level due to a major revision in the 1972 SIC system. For 1972, household insecticides and repellants, formerly product class 28421, were transferred to industry 2879, Agricultural Chemicals, N.E.C., and household bleaches, formerly included in industry 2819, Industrial Inorganic Chemicals, N.E.C., were reclassified to product class 28422.
- ⁸⁸This product class was formerly included in the 1967 product class 28192, Inorganic industrial and household bleaching compounds. Data for 1967 and earlier years are not available.
- ⁸⁹Comparable data are not available for 1967 and earlier years due to a major revision in the 1972 SIC system for this product class. Caulking and sealant compounds were reclassified from product class 28518 to product class 28914, Synthetic resin and rubber adhesives.
- ⁹⁰Represents values reported by tar distillers and excludes shipments for tar, tar crudes, and pitches by establishments classified in industry 2911, Petroleum Refining, and industry 3312, Blast Furnaces and Steel Mills (byproduct coke ovens).
- ⁹¹Data for 1972 are not completely comparable to earlier data due to a significant revision in the classification for this product class. Urea, formerly classified in 1967 product class 28182, is now classified as product class 28732, Urea. The effect of this change is estimated to be less than 4 percent of the value of shipments.
- ⁹²Excludes rubbing alcohol (primary to industry 2834, Pharmaceutical Preparations) and antifreeze (primary to industry 2899, Chemical Preparations, N.E.C.).
- ⁹³Comparable data are not available for 1967 and earlier years due to a major revision in the 1972 SIC system. Industry 2873, Nitrogenous Fertilizers, was formed by combining synthetic ammonia, nitric acid, and ammonium compounds (formerly classified as product class 28191); urea (formerly in product class 28182); and fertilizer materials of organic origin (formerly in product class 28712).

TABLE 6. Share of Value of Shipments of Each Class of Product Accounted for by the 4, 8, 20, and 50 Largest Companies: 1972 and Earlier Years—Continued

(Footnotes for table 6--Continued)

⁹⁴Comparable data are not available for 1967 and earlier years due to a major revision in the 1972 SIC system. Urea was formerly classified in 1967 product class 28182.

⁹⁵Comparable data are not available for 1967 and earlier years due to a significant revision to the 1972 SIC system. This product class was formerly classified in 1967 product class 28712, Mixed fertilizers.

⁹⁶The 1972 definition of this industry has been revised from that used in the 1967 SIC manual and a new SIC number and title were assigned. Industry 2874 was formed by combining phosphoric acid formerly classified in product class 28194, with superphosphate, other phosphatic fertilizer materials, and mixed fertilizers produced from one or more materials made in the same plant, which were formerly classified as industry 2871.

⁹⁷Comparable data are not available for 1967 and earlier years due to a significant revision in the 1972 SIC system. Phosphoric acid was formerly classified in product class 28194.

⁹⁸Comparability of this product class has changed as a result of the 1972 SIC revision. 1967 and earlier data are tabulated under the old definition. The production of fertilizer materials of organic origin was formerly classified with this product class under the product class 28712. The effect of this change is estimated to be less than 5 percent of the value of shipments.

⁹⁹Comparability of this product group has changed significantly as a result of the 1972 SIC revision. Industry 2879 as now constituted includes the manufacture of household insecticides and repellants which were previously classified as product class 28421 in industry 2842. The change is estimated to be 15 percent of the total value of shipments. 1967 and earlier data are tabulated under the old definition.

¹⁰⁰For 1972, 1967 industry 2879 was reclassified as product classes 28791, 28792, and 28793. Data for 1967 and earlier years are available only at the product group level.

¹⁰¹Comparable data are not available for 1967 and earlier years due to a major revision in the 1972 SIC system. This product group as now constituted includes synthetic resin adhesives from resins manufactured in the same establishment (formerly in industry 2821), caulking compounds and sealants (formerly in industry 2851), rubber cement (formerly in industry 3069), and sealants, n.e.c., (formerly in industry 2899), and excludes gelatin and sizes (now in industry 2899).

¹⁰²Comparable data are not available for prior years due to the reclassification of this product class for 1972. Product class 28913 was formerly included in 1967 product class 28911.

¹⁰³Comparable data are not available for prior years due to a significant revision in the 1972 SIC system. This product class includes synthetic resin adhesives (formerly product class 28215), rubber cement (formerly in product class 30698), and synthetic base adhesives (formerly in product class 28911).

¹⁰⁴Comparable data are not available for prior years due to a significant revision in the 1972 SIC system. This product class was formerly part of product class 28518.

¹⁰⁵For 1972, industry 2893 was reclassified as product classes 28931, 28932, 28933, 28934, and 28935. For 1967 and earlier years, data are available only at the product group level.

¹⁰⁶Comparability of this product group has changed slightly as a result of the 1972 SIC revisions. Industry 2899 as now constituted includes gelatin, except ready-to-eat dessert, (formerly classified in industry 2891), sizes (formerly in industry 2891), and embalming chemicals (formerly in industry 3994), and excludes sealants, n.e.c. (now classified in industry 2891).

¹⁰⁷Comparability of this product class has changed as a result of the 1972 SIC revision. 1967 and earlier data are tabulated under the old definition. This product class now includes sizes (formerly in industry 2891), and embalming chemicals (formerly in industry 3994), and excludes sealants, n.e.c. (now classified in industry 2891). The effect of this change is estimated to be approximately 5 percent of the value of shipments.

¹⁰⁸Data for 1972 are not directly comparable to earlier data due to a significant revision in the SIC system. Plastics footwear, which was classified in product group 3079- in 1967, is now included in product group 3021-. The amount of plastics footwear in 1967, and hence the degree of change for product group 3021-, is unknown. The relationships between the 1972 SIC number and the 1967 SIC number for the product classes in this grouping are shown below:

1972 SIC	1967 SIC	1972 SIC	1967 SIC
30211	{ 30210 pt 30798 pt	30212	{ 30210 pt 30798 pt

¹⁰⁹The rubber and plastics hose and belting product grouping is included for the first time in the census of manufactures for 1972. This product group includes all of 1967 product class 30691 (rubber and plastics belts and belting); all of 1967 product class 30692 (rubber hose and tubing) except 30692 81 (tubing, except medical and surgical and reinforced); part of 1967 product class 30795 (industrial plastics products); and part of 1967 product class 30798 (consumer and commercial plastics products, n.e.c.). The relationships between the 1972 SIC number and the 1967 SIC number for the product classes in this grouping are shown below:

1972 SIC	1967 SIC	1972 SIC	1967 SIC
30411	{ 30691 pt 30795 pt	30415	{ 30692 pt 30798 pt
30412	30691 pt		
30413	30692 pt		
30414	30692 pt	30416	{ 30692 pt 30798 pt

¹¹⁰This product grouping was significantly revised for 1972, although the code number was unchanged. All of 1967 product class 30691 (rubber and plastics belts and belting) and all of 1967 product class 30692 (rubber hose and tubing) except for code 30692 81 (tubing, except medical and surgical and reinforced) are now classified in product group 3041-. Rubber and plastics hose and belting. Tubing, except medical and surgical and reinforced, is now included in product class 30695. In addition, seals and packing (former product codes 30695 26, 27, and 28) are now included in product group 3293-; and latex and solvent-type cement (former product codes 30698 64 and 65) are now classified in product group 3291-.

¹¹¹The individual product codes included in this class of products for 1972 differ significantly from the prior years. Products shifting into or out of this class of products represent more than 15 percent of the total shipments value at the U.S. level. (See footnote 110).

¹¹²The individual product codes included in this class of products for 1972 differ from the 1967 definition. Products shifting into or out of this class of products represent approximately 13 percent of the total 1967 shipments at the U.S. level. (See footnote 110).

¹¹³Data for 1972 are not directly comparable to earlier data due to a significant revision in the SIC system. See the Explanatory Text section of the MC72(2)-30A, Rubber and Miscellaneous Plastics Products, for a list of the changes.

¹¹⁴The individual product codes included in this class of products for 1972 differ from the 1967 definition. Products shifting into or out of this class of products represent approximately 3 percent of the total 1967 shipments at the U.S. level. (See footnote 113).

¹¹⁵Comparable data are not available for 1967 and earlier years due to a major revision in the 1972 SIC system. For 1972, industry 3141, Shoes, Except Rubber, was split to form new industries 3143, 3144, and 3149.

¹¹⁶For 1972, product class 31411, Men's dress shoes, including play shoes was split to form new product classes 31431, 31432, and 31434.

¹¹⁷For 1972, product class 31414, Women's dress, work, and play shoes was split to form new product classes 31441, 31442, 31443, 31444, and 31445.

¹¹⁸Includes laminated glass made in industry 3211, Flat Glass, and laminated glass made in industry 3231, Products of Purchased Glass, combined to avoid disclosing figures for individual companies. For 1972, no production of shipments of "Laminated plate over 1/4 inch" (code 32113 31), "Laminated sheet (window) glass" (code 32113 51), or "Other laminated glass" (code 32113 71) were reported in industry 3211, Flat Glass. The same was true for 1967, except that a small amount of "Laminated plate over 1/4 inch" (code 32113 31) was produced in industry 3211, Flat Glass.

¹¹⁹Excludes value of laminated glass (product class 32313) which is included with industry 3211.

¹²⁰Insulation materials containing asbestos, which were previously classified in product class 32933, are now included in product class 32927. This shift into product class 32927 represents approximately 13 percent of the total 1967 shipments at the U.S. level.

¹²¹Not completely comparable. In 1954, an undetermined amount of vinyl asbestos tile was included in industry 3971, Plastics Products, N.E.C.

¹²²Comparable data are not available for 1967 and earlier years due to a major revision in the 1972 SIC system. Molded packings and seals, except plastics (formerly classified in product class 30695), axial mechanical face seals (formerly classified in product class 35992), plastics packing and seals (formerly classified in product class 30795), and leather packings, oil and grease retainers, including seals (formerly classified in product class 31210), are included in product class 32933 for 1972. Also, insulation materials containing asbestos, which were previously classified in product class 32933, are now included in product class 32927. This shift of products represents more than 15 percent of the total value of shipments at the U.S. level.

TABLE 6. Share of Value of Shipments of Each Class of Product Accounted for by the 4, 8, 20, and 50 Largest Companies: 1972 and Earlier Years—Continued

(Footnotes for table 6--Continued)

- ¹²³For 1963, exfoliated vermiculite was reclassified from industry 3296 to industry 3295 and roofing granules produced in conjunction with mining operations have been reclassified from industry 3295 to industry 3296. Revised concentration ratios are not available.
- ¹²⁴Product class 33121 includes ferroalloys made by establishments classified in industry 3312. This amounts to \$42.1 million for 1972, \$79.0 million for 1967, \$18.0 million for 1963, and (NA) not available for 1958. The totals for product group 3313- exclude ferroalloys made in industry 3312.
- ¹²⁵Excludes the value of those products produced and consumed within the same plant in the manufacture of other products. Therefore, the data are limited to the value of those products that were produced for sale in commercial markets or for transfer to other plants at the same company for use in manufacturing other products.
- ¹²⁶Comparable data are not available for 1967 and earlier years due to the fact that ductile iron castings is a separate class of products in 1972. The amount of ductile iron castings included in the 1967 totals for product classes 33212 and 33214 is unknown.
- ¹²⁷For 1972, product class 33220 was reclassified as product classes 33221 and 33222.
- ¹²⁸For 1972, old product group 3352- was split to form new product groups 3353-, 3354-, and 3355-.
- ¹²⁹For 1972, product class 33560 was reclassified as product classes 33561, 33562, 33563, and 33569.
- ¹³⁰Product class 33569 includes bare nonferrous metal wire, made in industry 3356 (code 33569 92). This amounts to \$61.4 million for 1972, \$34.6 million for 1967, and (NA) not available for 1963. The total for product class 33573 excludes bare nonferrous metal wire, made in industry 3356.
- ¹³¹For 1972, product class 33610 was reclassified as product classes 33611 and 33612.
- ¹³²For 1972, old product group 3399- was split to form new product groups 3398- and 3399-.
- ¹³³Value represents chiefly receipts for work done on material owned by others. The value represents only the work done by establishments classified in the industry for which the product or service is primary.
- ¹³⁴Not completely comparable; 1954 figures include "Metal fluid milk shipping and delivery containers" valued at \$8,638,000. In 1958, these containers were included in product class 34943.
- ¹³⁵The 1972 census program requested separate value figures for aluminum cans and steel cans. Review indicates that the separation was not properly reported. Accordingly, these values have been combined. For 1967 and earlier years, data on aluminum cans and steel cans were not collected separately.
- ¹³⁶Comparable data are not available for 1967 and earlier years due to a major revision in the 1972 SIC system. Warm air furnaces (product class 34332 in 1967) and parts and attachments for warm air furnaces (code 34336 73 in 1967) have shifted to industry 3585, Refrigeration and Heating Equipment, in 1972. This change represents greater than 15 percent of the total 1967 shipments at the U.S. level.
- ¹³⁷1972 product class 34337 is not completely comparable to the sum of 1967 product classes 34331 and 34336, since code 34336 73 shifted to industry 3585 in 1972. However, this change represents approximately 3 percent of the total 1967 shipments at the U.S. level.
- ¹³⁸Comparable data are not available for 1967 and earlier years due to a major revision in the 1972 SIC system. For 1972, product group 3449- was split into product groups 3448- and 3449-.
- ¹³⁹For 1972, product class 34510 was reclassified as product classes 34511 and 34512.
- ¹⁴⁰For 1972, product class 33920 was reclassified as product classes 34631 and 34632.
- ¹⁴¹Comparable data are not available for 1967 and earlier years due to a major revision in the 1972 SIC system. For 1972, product group 3461- was split into product groups 3465-, 3466-, and 3469-.
- ¹⁴²Revisions were made for 1963 to include automobile stampings produced by automobile producing companies. Concentration ratios cannot be published for 1963 on a revised basis without approximating the operations of individual companies.
- ¹⁴³Comparable data are not available for 1967 and earlier years.
- ¹⁴⁴For 1972, product class 34930 was reclassified as product classes 34931 and 34932.
- ¹⁴⁵Comparable data are not available for 1967 and earlier years due to a major revision in the 1972 SIC system. For 1972, product group 3481- was split into product groups 3495- and 3496-.
- ¹⁴⁶For 1972, product class 34970 was reclassified as 34971, 34972, and 34973.
- ¹⁴⁷Comparable data are not available for 1967 and earlier years due to a major revision in the 1972 SIC system. For 1972, product groups 3492-, 3496-, and 3499- were combined to form product group 3499-.
- ¹⁴⁸For 1972, farm wagons, trucks, and other farm transportation equipment were moved from industry 3799 to product class 35232. Products shifting into industry 3523 represent approximately 2 percent of the total 1967 shipments at the U.S. level.
- ¹⁴⁹In years prior to 1967, parts were included with individual product classes of industry 3522, whereas, in 1967, parts are included in a separate product class 35229.
- ¹⁵⁰For 1972, product class 35222 was reclassified as product classes 35232 and 35242.
- ¹⁵¹For 1972, product class 35228 was reclassified as product class 35238. Power hedge trimmers and shears moved from product class 35228 to 35249, for 1972. Farm wagons, trucks, and other farm transportation equipment were reclassified from product class 37992 to product class 35238. Products shifting into or out of this class of product represents approximately 12 percent of the total 1967 shipments at the U.S. level.
- ¹⁵²For 1972, product class 35229 was reclassified as product classes 35239 and 35249.
- ¹⁵³For 1972, product class 35220 was reclassified as product classes 35230 and 35240.
- ¹⁵⁴Parts and attachments for wheel and tracklaying tractor shovel loaders are included in product class 35313 beginning in 1965. In prior years they were included in product class 35197. 1963 concentration ratios are not available on a basis comparable to 1967.
- ¹⁵⁵For 1972, automatic stackers and parts and attachments are reclassified from product class 35370 to 35362. Then products shifting into product class 35362 represent approximately 10 percent of the total 1972 shipments at the U.S. level. For 1967, data for these products were included in industry 3537, but were not available separately.
- ¹⁵⁶The definitions of product classes 35441 and 35442 have been revised. Code 35442 11, diecasting dies (molds), was included through 1966 in product class 35441, but is now included in product class 35442. 1963 concentration ratios are not available on a basis comparable to 1967.
- ¹⁵⁷For 1972, old industry 3548 was split to form new industries 3546, 3547, and 3549.
- ¹⁵⁸For 1972, old product class 35480 was split to form product classes 35460, 35470, and 35490.
- ¹⁵⁹For 1972, dairy packaging and bottling machinery has shifted from product class 35511 to product class 35514. These products shifting out of product class 35511 represent approximately 34 percent of the total 1972 shipments at the U.S. level.
- ¹⁶⁰For 1972, wrapping machines have moved from product class 35512 to product class 35514. Wrapping machines shifting out of product class 35512 represent approximately 5 percent of the total 1972 shipments at the U.S. level.
- ¹⁶¹For 1972, product class 35513 was reclassified as product classes 35513 and 35514.
- ¹⁶²For 1972, industry 3561 was reclassified as industries 3561 and 3563.
- ¹⁶³For 1972, vacuum pumps shifted from product class 35612 to product class 35631. Products shifting out of product class 35612 represent approximately 12 percent of the total 1967 shipments at the U.S. level.
- ¹⁶⁴For 1972, industrial spraying equipment was reclassified as product class 35635; this product was formerly part of product class 35615. Industrial spraying equipment shifting out of product class 35615 represent more than 15 percent of the total shipments at the U.S. level.
- ¹⁶⁵For 1972, parts for pumps and compressors (old product class 35616) has been split out to parts and attachments for pumps (product class 35616) and parts and attachments for air and gas compressors (product class 35632).
- ¹⁶⁶For 1967, taper roller bearings (product class 35622) has become a separate product class rather than included with roller bearings complete (product class 35623). 1963 concentration ratios are not available on a basis comparable to 1967. The 1963 product class representing roller bearings complete, had total shipments of 446.3 of which the 4 and 8 largest companies accounted for 80 and 93 percent, respectively.
- ¹⁶⁷For 1972, industry 3566 was reclassified as industries 3566 and 3568.
- ¹⁶⁸For 1972, the not specified by kind, for product class 35680 is included with product class 35660.
- ¹⁶⁹For 1972, product classes 35741 and 35743 are combined with product class 35745 in order to avoid disclosing figures for individual companies.
- ¹⁷⁰For 1972, product class 35794 is combined with product class 35796 in order to avoid disclosing figures for individual companies.
- ¹⁷¹For 1972, product class 35797 is combined with product class 35798 in order to avoid disclosing figures for individual companies.
- ¹⁷²For 1972, coin-operated washers and dryers, under 10-pound load, and parts and attachments for these products have been moved from product class 35820 to product class 36333. Products shifting out of product class 35820 represent more than 15 percent of the total value of shipments.
- ¹⁷³For 1972, warm air furnaces were changed from product class 34332 to product class 35858. Parts for warm air furnaces moved from product class 34336 to 35858 for 1972. Parts for warm air furnaces shifting into product class 35858 represent approximately 4 percent of the total 1967 shipments at the U.S. level.
- ¹⁷⁴For 1972, product classes 35851 and 35852 are reclassified as product classes 35851, 35852, and 35856.

TABLE 6. Share of Value of Shipments of Each Class of Product Accounted for by the 4, 8, 20, and 50 Largest Companies: 1972 and Earlier Years—Continued

(Footnotes for table 6--Continued)

¹⁷⁵Product class 36333, Other household laundry equipment and parts, was expanded from 1967 product class 36332 to include coin-operated washer-extractor combinations and coin-operated drying tumblers, both 10-pound maximum load and under. Both of these products were part of 1967 product class 35820. The value of these added products was \$28.0 million in the 1972 Census of Manufactures.

¹⁷⁶In 1972, product class 36457, Portable residential type lighting fixtures and parts and accessories, for residential lighting fixtures, including 1967 product class 36427, Residential type electric fixtures (portable), includes part of 1967 product class 36426, Other electric and nonelectric lighting equipment (including hand portable equipment), and parts and accessories. The part of 1967 product class 36426 in 1972 product class 36457, had a value in 1972 of \$15.1 million.

¹⁷⁷Value of product class, not specified by kind, for industries 3646, 3647, and 3648 are included in industry 3645 prior to 1972. All products not specified by kind for administrative records and most for other records are included in industry 3645, in 1972.

¹⁷⁸In 1972, product class 36463, Industrial-type electric lighting fixtures and parts, including 1967 product class 36423, Industrial type electric fixtures, includes part of 1967 product class 36426, Other electric and nonelectric lighting equipment (including hand portable equipment) and parts and accessories. The part of 1967 product class 36426, in 1972 product class 36463 had a value in 1972 of \$22.6 million.

¹⁷⁹In 1972, parts and accessories for residential, commercial, industrial, institutional, and vehicular lighting fixtures was split out of 1972 product class 36489, Other electric and nonelectric lighting equipment and parts. These products were part of this product class before 1972. The value of these products in the 1972 Census of Manufactures was \$39.1 million.

¹⁸⁰In 1967, product class 36795 was split into product classes 36780 and 36790 for 1972. In addition, 1967 product class 36790 was tabulated as part of 1972 product class 36790.

¹⁸¹For 1972, industry 3722 was split into two separate industries, 3724 and 3764. The historical data for industry 3722 in 1967 are presented with 1972 industry 3724.

¹⁸²For 1972, industry 3729 was split into two separate industries 3728 and 2769. This historical data for industry 3729 in 1967 are presented with 1972 industry 3728.

¹⁸³This product class was identified as product class 37230 prior to 1967.

¹⁸⁴For 1972, industry 3751 is not fully comparable with prior years. Self-propelled golf carts were moved from product class 37510 in 1967 to product class 37993 in 1972. The value of shipments for self-propelled golf carts was \$36.3 million in 1967 and \$54.1 million in 1972.

¹⁸⁵Comparable data are not available for 1967 and earlier years due to a major revision in the 1972 SIC system. Parts of 1967 industry 3791 and product class 37910, Recreation type trailers, pickup campers, truck mounted campers, and pickup box covers or caps, and industry 3799 and product class 37991 (collapsible camping trailers and travel trailers) less than 11 feet in length make up industry 3792. Industry 3792 represents approximately 27 percent of the products of old industry 3791 plus 16 percent of old industry 3799.

¹⁸⁶Comparable data are not available for 1967 and earlier years due to a major revision in the 1972 SIC system. Product class 37921 represents approximately 48 percent of 1967 product class 37910.

¹⁸⁷Comparable data are not available for 1967 and earlier years due to a major revision in the 1972 SIC system. Product class 37922 represents approximately 21 percent of 1967 product class 37910 plus 47 percent of 1967 product class 37991.

¹⁸⁸Comparable data are not available for 1967 and earlier years due to a major revision in the 1972 SIC system. Farm wagons and other farm transportation equipment were moved from industry 3799 to industry 3723. Self-propelled golf carts were moved into industry 3799 from industry 3751.

¹⁸⁹Comparable data are not available for 1967 and earlier years due to a major revision in the 1972 SIC system. Product class 37993 represents approximately 14 percent of 1967 product class 37510.

¹⁹⁰Comparable data are not available for 1967 and earlier years due to a major revision in the 1972 SIC system. Product class 37994 represents approximately 17 percent of 1967 product class 37992.

¹⁹¹Comparable data are not available for 1967 and earlier years due to a major revision in the 1972 SIC system. Product class 37999, Farm wagons and other farm transportation equipment, \$95.2 million in 1972, were reclassified in industry 3523. Other automobile trailers, \$100.0 million in 1972 were added to product class 37999 from 1967 product class 37991. The balance of product class 37999, \$359.5 million in 1972, were reclassified from 1967 product class 37992.

¹⁹²The 1967 Standard Industrial Classification product class 38213, Industrial process instruments, was split into three product classes in the 1972 Census of Manufactures: Product class 38230, Process control instruments; product class 38292, Physical properties testing and inspection equipment; and product class 38293, Commercial meteorological and general purpose instruments.

¹⁹³The 1967 product class 38216, Other mechanical measuring and controlling instruments, was split into two product classes in the 1972 Census of Manufactures: Product class 38243, Counting devices; and product class 38294, Nuclear radiation, detection and monitoring instruments.

¹⁹⁴A small part of 1967 industry 3611, Instruments to Measure Electricity, was not moved to industry 3825 in 1972. Instrument transformers, part of 1967 product class 36113, Other electrical measuring instruments became part of 1972 product class 36125, Specialty transformers, except fluorescent lamp ballast. The other part of 1967 product class 36113 became all of 38253, Other electrical measuring instruments, in 1972.

¹⁹⁵In 1972, industry 3832, Optical instruments and lenses, is a combination of two 1967 industries: Industry 1941, Sighting and fire-control equipment made from purchased lenses; and industry 3831, Optical instruments and lenses, except sighting and fire control equipment. Historical data for industry 1941 are not available.

¹⁹⁶The figures for 1972 are not strictly comparable with those for prior years. The report form used for this industry in the 1972 Census of Manufactures contained an inquiry designed to identify establishments either grinding lenses or fitting glasses to prescription. Such establishments have been reclassified to trade industries.

¹⁹⁷Industry 3873, Watches, clocks, and watchcases was published as two separate industries in 1967: Industry 3871, Watches and Clocks; and industry 3872, Watchcases.

¹⁹⁸For 1967, golf equipment (product class 34492) has become a separate product class rather than being included with other sporting and athletic goods (product class 39493) as was done in prior years. 1963 concentration ratios are not available on a basis comparable to 1967. The 1963 product class representing other sporting and athletic goods (including golf equipment) had total shipments of \$525.4 million of which the 4 and 8 largest companies accounted for 33 and 46 percent, respectively.

¹⁹⁹Broad-tipped markers, formerly in industry 3953 (code 39530 43), are now included in industry 3951 (code 39510 43). This product code shift out of industry 3953 represents approximately 11 percent of the total 1967 shipments of products in industry 3953. The product code shift into industry 3951 is approximately 8 percent of the total 1967 shipments of products in industry 3951.

²⁰⁰For 1972, product class 39550 was reclassified as product classes 39551 and 39552.

²⁰¹Data for 1972 are not directly comparable to earlier data due to a revision in the SIC system. For 1972, data for embalming chemicals are included in product group 2899-; burial garments in product group 2389-; and innerliners, sold as such, in product group 2399-. The exact amount of these products included in product group 3994- for 1967 is unknown, but it is estimated to represent less than 7 percent of the total value of shipments at the U.S. level.

²⁰²Data for 1972 are not directly comparable to earlier years due to a significant revision in the SIC system. Children-sized caskets and coffins are now included in product class 39953, whereas in 1967 they were included in product classes 39941 and 39942. However, the effect of this change is unknown.

²⁰³Comparable data for 1967 and earlier years are not available. Since the effects of the changes noted in footnotes 201 and 202 are estimated to be greater than 15 percent.

²⁰⁴The definitions of industry 3999 has been revised for 1967. 1963 concentration ratios are not available on a basis comparable to 1967.

²⁰⁵Product classes 39993, Matches; 39994, Candles; 39995, Lamp shades; 39996, Furs, dressed and dyed, and 39997, Umbrellas, parasols, and canes are part of industry 3999, rather than separate industries as they were in 1966 and prior years. The 1967 figures, therefore, are not directly comparable to 1963 because the administrative record cases (explained in the Introduction under "not specified by kind" classes) have been included in product class 39990 for increasing the associated concentration ratios to a level not comparable to previous years.

²⁰⁶Includes receipts for work done on materials owned by others.

TABLE 7. Share of Value of Shipments of Selected Product Classes Primary to More Than One Industry Accounted for by the 4 and 8 Largest Companies: 1972 and Earlier Years

1972 code ¹	Class of product and year ¹	Value of shipments ²			
		Total (million dollars)	Percent accounted for by ³ —		
			4 largest companies	8 largest companies	
20116 20136	} Pork, processed or cured (not canned or made into sausage).....	1972..	2,413.5	22	32
		1967..	2,008.0	22	37
		1963..	1,634.7	25	41
		1958..	1,821.7	30	46
		1954..	1,847.3	40	56
20117 20137	} Sausage and similar products (not canned).....	1972..	3,264.4	17	26
		1967..	2,286.6	19	30

1958..	127.1	37	42

¹Product classes (5-digit codes) are assigned to the industry to which they are primary. Products which are primary to more than one industry are split according to the industry codes of the establishment producing them. In this table, such products have been combined to yield a wherever-made total. See table 6 for the figures for each product class separately.

²Represents, for the combination of numerically coded product classes, the total value shipped by all producers in all industries.

³Company affiliation is determined from census reports and public records. The value of shipments of products falling within each combination of product codes was aggregated for plants under common ownership and company totals derived to determine the largest producers.

⁴For 1967, one or more of the 1963 product classes have been redefined. Prior years' data and their associated concentration ratios are not available on a basis comparable to 1967.

⁵For 1963, one or more of the 1958 product classes have been redefined. Prior years' data and their associated concentration ratios are not available on a basis comparable to 1963.

TABLE 8. Share of Selected Items Accounted for by the 4, 8, 20, and 50 Largest Companies Ranked on Value of Shipments for Each Industry: 1972—Continued

(Footnotes for Table 8)

- Represents zero. (X) Not applicable. (D) Withheld to avoid disclosing figures for individual companies. (Z) Less than half of one percent.

¹Includes expenditures for plants in operation and for plants under construction but not yet in operation.

²Value added by manufacture is the basis for determining company rank in this industry rather than value of shipments.

³The value of shipments figures for this industry include extensive duplication arising from shipments between establishments in the same industry classification.

⁴Establishments in this industry reported value of production rather than value of shipments. Consequently, the formula for computing adjusted value added by manufacture was modified to include only changes in work-in-process inventories between the beginning and end of the year.

⁵In this industry, which contains a large number of very small establishments, there is a possibility that some of these small establishments have been misclassified as to industry. Only the company and establishment counts are affected by these misclassifications.

⁶Government-owned, contractor-operated plants are included in addition to privately-owned establishments. For these government-owned, contractor-operated plants, the data includes value added based upon averages reported for commercial establishments in prior years but excludes government-owned materials furnished to these establishments and capital expenditures.

⁷Separate data cannot be published for industry 3572, Typewriters, without revealing the operations of individual companies; accordingly, industry 3572 has been combined with industry 3579, Office Machines, N.E.C., for 1972.

⁸Value of work done rather than value of shipments is reported for this industry; therefore, value added has not been adjusted for any inventory change.

EXPLANATORY TEXT

Information concerning whether a plant is either independent or part of a multiestablishment company contributes importantly to our knowledge of the structure of manufactures in the United States. However, this classification is significantly affected by the way in which the census of manufactures is taken. In 1947, it was not taken in conjunction with the census of business or mineral industries and the multiunit classification depended on whether or not the company operated more than one manufacturing plant. In 1954 and since, the census of manufactures has been conducted in conjunction with the censuses of business and mineral industries, and so the multiunit classification now depends on whether or not the company operates at more than one location within the temporal spans of those censuses. Thus, in 1954 and subsequent census years, a company with one manufacturing plant and a nonmanufacturing location or separate administrative office was classified as multiunit.

While the importance of multiunit establishments, in terms of employment and value added, has increased since 1947 (see table 1), part of this increase is undoubtedly due to the change in collection procedures that took place between 1947 and 1954. However, during those years, this increase in employment and value added was accompanied by a decline in the percentage of establishments accounted for by multiunit companies. Part of this was due to the inclusion in the 1954 Census of Manufactures of industries characterized by a large number of small firms (e.g., milk distribution and logging) which account for a very small amount of the total manufacturing employment and value added. This shifting in the determination of single and multiunit establishments did not occur after the 1954 census, and the 1958 and 1963 data are completely comparable.

In 1963, each establishment was asked to report the form of organization of the company which operated it. In 1967, a

separate category of establishments was created to account for single-unit manufacturing firms with less than 10 employees which were excused from filing reports. Information for most single-unit establishments with less than 10 employees in 1967 is contained in the "administrative record" classification. Thus, the relative importance of the single-unit classification can be determined by the combination of the categories, "single-unit companies," and "administrative records."

In 1972, the method for classifying multiunit and single-unit companies was the same as in 1967. However, "legal form of organization" data was not requested on the 1972 census report forms. They were, instead, compiled from administrative-record information obtained from other government agencies.

A review of the legal form of organization data indicated that a number of establishments were not classified by form of organization. Those establishments with 20 employees or more were contacted to determine this information. Establishments with less than 20 employees were not contacted and have been classified as unknown. There were approximately 27,000 small establishments classified in the unknown legal form of organization category. These establishments account for 0.5 percent of total employment in the United States and 0.6 percent of value of shipments.

Data in this publication may differ slightly from the industry and area reports previously published. These differences are due to corrections which were made for minor errors identified after the industry and area reports were issued. This report reflects these corrections.

TABLE 1. Selected Statistics for Operating Manufacturing Establishments, by Type of Operation and Legal Form of Organization: 1972, 1967, 1963, 1958, 1954, and 1947

Item ¹ and year	Establishments (number)	All employees		Production workers		Value added by manufacture (million dollars)	Capital expenditures, new ² (million dollars)
		Total	Payroll	Total	Wages		
		(1,000)	(million dollars)	(1,000)	(million dollars)		
All establishments.....

TABLE 1. Selected Statistics for Operating Manufacturing Establishments, by Type of Operation and Legal Form of Organization: 1972, 1967, 1963, 1958, 1954, and 1947—Continued

(Footnotes for table 1)

NA Not available.

¹The 1958 and 1963 figures include establishments classified in industry 3273, Ready-Mixed Concrete, and establishments classified in industry 3599, Miscellaneous Machinery, that were engaged exclusively or almost exclusively in machine shop repair work. The data for such establishments are excluded from the 1954 and 1947 figures. The 1963, 1958, and 1954 figures include data for establishments engaged in the processing and distribution of fluid milk, industry group 202, Dairies. Those establishments were not included in the 1947 figures. In addition, the 1963 and 1954 census figures include data for logging camps and contractors, industry 2411, which were not included within the scope of the 1947 census. Data for Alaska and Hawaii, which are included for 1963, are not available on a type-of-operation and legal form of organization basis for 1958 and earlier years.

²The figures for 1954, 1958, 1963, 1967, and 1972 include expenditures for plants under construction and not yet in operation. This information was not collected for 1947.

³All data are based on reports for individual manufacturing establishments, and not on a company basis. Each establishment of multiestablishment companies is classified by its primary industrial activity. For this reason, the statistics presented in this table cannot be compared directly with tabulations in which the whole corporation or company is the reporting unit and the entire company is classified in one industry—for example, "Statistics of Income, Corporation Income Tax Returns," compiled by the Bureau of Internal Revenue, U.S. Treasury Department. Since 1958, establishments were classified as part of a multiunit company when the company operated two establishments or more, of which at least one was a manufacturing establishment. In 1947, establishments were considered part of a multiunit only if the company operated two manufacturing establishments or more.

⁴For 1963 and earlier years, the difference between the sum of individual and partnership forms of organization and the total for noncorporate is represented by other noncorporate forms including cooperatives, establishments operated by estate administrators, trusteeships, receiverships, public and quasi-public organizations, and, in addition, the misassignment of small establishments that were not corrected since they were not statistically significant. For 1972 and 1967, this category is shown for each industry and for all manufacturing total.

⁵In 1967, administrative records were not identified by legal form of ownership or as single-unit or multiunit companies. However, the administrative records are all for single-unit establishments.

⁶In the 1967 census, no legal form of ownership information was available for classifying administrative records. In the 1972 census, legal form of ownership data were supplied by the Internal Revenue Service, and administrative records were tabulated based on this data. For comparison purposes, the following are total 1972 census data for administrative records: 122,164 establishments, 382 (000) employees, \$2,626 million payroll, 328 (000) production workers, \$1,795 million production workers' wages, \$5,957 million value added, and \$376 million capital expenditures.

- Represents zero. (D) Withheld to avoid disclosing figures for individual companies. (Z) Less than half of the unit of measurement shown (under 50 thousand dollars or man-hours; under 50 employees).

¹All data are based on reports for individual manufacturing establishments and not on a company basis. Each establishment of multiestablishment companies is classified by its primary industrial activity. For this reason the statistics presented in this table cannot be compared directly with tabulations in which the whole corporation is the reporting unit and the entire company is classified in one industry—for example, the "Statistics of Income, Corporation Income Tax Returns," compiled by the Bureau of Internal Revenue, U.S. Treasury Department. Establishments were classified as part of a multiunit company when the company operated two establishments or more, of which at least one was a manufacturing establishment.

²Includes expenditures for plants in operation and for plants under construction but not yet in operation.

³Establishments in this industry reported value of production rather than value of shipments. Consequently, the formula for computing adjusted value added by manufacture was modified to include only changes in work-in-process inventories between the beginning and end of the year.

⁴Establishments in this industry reported value of work done instead of value of shipments. Consequently, the formula for computing value added by manufacture was not adjusted for any inventory change between the beginning and end of the year. It does not include value added by resales.

Water Use in Manufacturing

EXPLANATORY TEXT

GENERAL

This report contains statistics showing the use of water by manufacturing industries in 1973 with selected comparable data for 1968.

Information on industrial water use by manufacturing establishments was first collected and published by the Bureau of the Census in the 1953 Annual Survey of Manufactures. In the 1963 Census of Manufactures, as in the 1954 census, information on water use was collected from all manufacturing establishments employing six people or more, except for establishments in the printing and publishing and apparel industries. The latter establishments are relatively small water users and/or operate primarily in rented quarters where water is usually furnished by the landlord. The detailed information on water utilization for 1968 and 1973 was collected and published for those manufacturing establishments using 20 million gallons of water or more per establishment.

Information was not collected in the 1958 Census of Manufactures. However, a special post-census survey was taken in 1959 which included all establishments reporting water use of 20 million gallons or more in 1954 as well as all companies having at least one establishment with 250 employees or more in the 1958 Census of Manufactures. In industries known to be extensive users of water, all establishments with 100 employees or more were included.

Approximately 85 percent of the 15.0 trillion gallons consumed by manufacturing establishments in 1973 was accounted for by four major industry groups; namely, Primary Metal Industries (SIC Major Group 33), Chemicals and Allied Products (SIC Major Group 28), Paper and Allied Products (SIC Major Group 26), and Petroleum and Coal Products (SIC Major Group 29). Even within these major groups, specific industries accounted for the major share: Blast furnaces and steel mills consumed about 27 percent of the total manufacturing consumption of water, and manufacturers of industrial organic chemicals used about 14 percent of the total. About 70 percent of industrial water was consumed by establishments located in six Water Use Regions; namely, the Great Lakes, the Ohio River, the Middle Atlantic, the Texas Gulf, the Lower Mississippi, and the South Atlantic Regions.

MANUFACTURERS' USE OF WATER

While manufacturing industries are important users of water in the United States, the utilization by such establishments is highly concentrated. According to the 1973 survey, establishments with an annual water intake of 20 million gallons of

water or more accounted for about 97 percent of water withdrawn for manufacturing purposes. These plants, however, represent only about 4 percent of the total number of manufacturing establishments and employ approximately 43 percent of the total number of persons engaged in manufacturing within the major groups covered in this survey. (See table A.)

1973 INDUSTRIAL WATER USE

In the 1972 Census of Manufactures, the standard census forms submitted by all establishments employing 10 people or more contained a check-type question on water consumption in terms of broad size ranges of gallons used. Approximately 13,300 establishments indicated the use of 20 million gallons or more of water in 1972. These "large" water users were included in the mailing of the special water use survey for 1973. Of that number, 10,700 reported detailed information on water intake, recirculation, discharge, method of water treatment, and capital expenditures and annual costs for water treatment. Most of the other 2,600 establishments indicated that water use in 1973 was less than 20 million gallons and are, therefore, excluded from this study. All data for water use exclude government owned establishments operated by private contractors for the account of the Atomic Energy Commission. The 1973, 1968, 1964, and 1959 figures include data for establishments located in Alaska and Hawaii. The 1954 figures exclude those establishments.

While the quantity of water intake by manufacturing establishments is relatively large, the quantities actually consumed in process, by evaporation, etc., is only about 6 percent of the withdrawals. Data on net use, as defined above, may be calculated in the tables shown in this report by subtracting water discharged from water intake. Gross water use, as shown in the tables, reflects recirculation or reuse of the water in the same establishments and partially reflects water management. While no measure of the deterioration of the water resulting from use is available, data are shown for the quantities of intake water treated as well as for treatment of water for discharge.

The tables appearing in this chapter provide statistics for establishments using 20 million gallons or more annually, and include those which recirculate and those which treat discharged water. The arrangement of the data is by industry, Water Use Region, and State. The boundaries for States are political, while those for Water Use Regions are combinations of counties without regard for State lines. These regions,

which center around river basins, were developed in consultations with the Federal agencies having responsibility for water development or use and with representatives of private industry, and they approximate the major drainage systems in the country. Descriptions of the Water Use Regions are included at the end of this text. It was not possible to follow the exact definitions because Water Use Regions sometimes split counties. For technical reasons, county lines were followed in this survey for purposes of tabulating Water Use Region data. The areas included are shown in a series of maps appearing in this report. The industry classifications used are based on the 1972 edition of the Standard Industrial Classification (SIC) manual. (See Introduction.)

Totals for water use have been provided for the SIC industry classifications at the 2-, 3-, and 4-digit levels. Differences in manufacturing processes are not as great at the SIC 4-digit level as at the higher order 2- and 3-digit levels. Accordingly, the water use statistics are most meaningful when examined on a 4-digit SIC basis and related to the processes, products, employment data, etc., at that level. The aggregations at the 3-digit, and especially at the 2-digit levels, represent totals for industries which differ widely in processes used, materials fabricated, or products produced. Thus, for example, the water consumption use for SIC Major Group 26, Paper and Allied Products, will differ in the Columbia-North Pacific Water Use Region from that in California-South Pacific Water Use Region because of industrial composition as well as geography or other factors.

MEASURES OF INDUSTRIAL ACTIVITY

While industrial processes and geography determine very largely the consumption pattern of water intake, differing manufacturing practices and institutional variations also affect the use and reuse of water. Measures regarding the relationship of water intake and water management to industrial activity are frequently needed to gage present and future industrial water requirements.

To facilitate such studies at either local or regional levels, the tables shown in this report contain data showing, for selected industrial groups, the employment, value added by manufacture, and value of shipments for significant water users which, as indicated above, account for practically all industrial water consumption. The most valid use of these data is to provide measures of industrial activity for significant water-using establishments as well as to show those establishments which circulate water, treat water, and discharge or use water for other purposes. The industrial activity measures (employment, value of shipments, and value added by manufacture) are from the census of manufactures covering the year 1972.

DEFINITIONS AND DESCRIPTIONS

INDUSTRIAL WATER USE TERMS

The terms "establishments," "manufacturing industries," "industry classifications," and "Standard Industrial Classification" are defined in the Introduction.

Water Intake by Source

Public water system.—Water supplied by a water system (whether municipally or privately owned) whose primary purpose is to supply water to the general public. The data also include water supplied by systems whose principal function is to supply water to industrial users.

Company water system.—Water supplied from a company's water supply system or obtained from another company where the supplying company is not primarily a water supplier to the general public and/or industrial users. The data also include that portion of water obtained from a joint water supply system operated by the reporting company.

Brackish water.—All water with 1,000 to 10,000 parts per million of dissolved solids.

Salt water.—All water with more than 10,000 parts per million of dissolved solids.

Water Intake by Purpose

Process.—Water that comes directly in contact with products and/or materials, including water which is consumed in production.

Sanitary service.—Water used for drinking, lunchrooms or cafeterias, and domestic sewage.

Gross water used.—Represents the estimated quantity of water that would have been required if no water had been recirculated or reused. For example, if total water intake was 400 million gallons and, of this 400 million gallons, 100 million gallons were used twice for cooling purposes and once for washing products or materials, the total water required would be 300 million gallons, plus the 100 million gallons not recirculated, for a total of 400 million gallons (less consumption and evaporation loss).

Water Discharged

Total.—Quantity of water brought to ultimate discharge point. The data exclude quantities of water held in ponds, lagoons, or

EXPLANATORY TEXT—Continued

basins, for reuse or treatment, or water discharged by evaporation processes.

Public utility sewer.—Water discharged to public utility sewer systems, whether municipally or privately owned.

Ground.—Includes quantities which seep into ground from collection basins such as ponds and lagoons.

Transferred to other users.—Includes quantities transferred, after use, to another establishment of either the same company or another company.

EXPENDITURE AND COST ITEMS

Capital expenditures.—Expenditures for new water treatment plants and equipment that are chargeable to the fixed asset accounts and for which depreciation or amortization reserves are maintained. Companies reported actual capital outlays during the year—not the final value of equipment put in place and buildings completed during the year. Capital expenditures during the year were determined by the following computation: The cost of additions completed during the year, plus construction in progress at the end of the year, minus construction in progress at the beginning of the year. Expenditures for land are excluded.

Annual cost.—Includes the estimated costs of material, parts, fuel, power, labor, and depreciation (or amortization) due to the operation and maintenance of water treatment plant and equipment. It also includes leasing costs of equipment used to treat water and costs of water treatment services provided by private contractors. Figures exclude payments to governmental units for public sewerage.

WATER USE REGIONS

New England.—The drainage within the United States that ultimately discharges into (a) the Bay of Fundy; (b) the Atlantic Ocean, whose point of discharge is located within and between the States of Maine and Connecticut; (c) Long Island Sound; and (d) the St. Francis River, a tributary of the St. Lawrence River.

Middle Atlantic.—The drainage within the United States that ultimately discharges into (a) the Atlantic Ocean, whose point of discharge is located within and between the States of New York and Virginia; and (b) the Richelieu River, a tributary of the St. Lawrence River.

South Atlantic-Gulf.—The drainage that ultimately discharges into (a) the Atlantic Ocean, whose point of discharge is located within and between the States of North Carolina and Florida; and (b) the Gulf of Mexico, whose point of discharge is located within and between the States of Florida and Mississippi, including the Pearl River.

Great Lakes.—The drainage within the United States that discharges into (a) the Great Lakes system, including the Lakes surfaces; and (b) the St. Lawrence River as far east as, but excluding, the Richelieu River.

Ohio.—The drainage of the Ohio River, excluding that of the Tennessee River.

Tennessee.—The drainage of the Tennessee River.

Upper Mississippi.—The drainage of the Mississippi River above the mouth of the Ohio River, but excluding that of the Missouri River above a point immediately below the mouth of the Gasconade River.

Lower Mississippi.—The drainage of (a) the Mississippi River below the mouth of the Ohio River, but excluding the drainages of the Arkansas, White, and Red Rivers above the points of highest backwater effects of the Mississippi River in those rivers; and (b) the coastal streams, other than the Mississippi River, that discharge into the Gulf of Mexico from, but excluding, the Pearl River to, but excluding, the Sabine River.

Souris-Red-Rainy.—The drainage within the United States of the Souris, Red, and Rainy Rivers.

Missouri.—The drainage within the United States of (a) the Missouri River above a point immediately below the mouth of the Gasconade River; and (b) the Saskatchewan River.

Arkansas-White-Red.—The drainage of (a) the Arkansas River above the point of highest backwater effect of the Mississippi River; (b) the Red River above the point of highest backwater effect of the Mississippi River; and (c) the White River above the point of highest backwater effect of the Mississippi River, near Peach Orchard Bluff, Arkansas.

Texas-Gulf.—The drainage that discharges into the Gulf of Mexico from and including Sabine Pass to, but excluding, the Rio Grande and the lower Rio Grande Valley.

Rio Grande.—The drainage within the United States of (a) the Rio Grande; (b) the San Luis Valley, North Plains, San Augustine Plains, Mimbres, Estancia, Jornada del Muerto,

EXPLANATORY TEXT—Continued

Tularosa, Salt, and various smaller closed basins; and (c) the lower Rio Grande Valley.

Upper Colorado.—The drainage of (a) the Colorado River above the Lee Ferry Compact Point which is about 1 mile below the mouth of the Paria River; and (b) the Great Divide closed basin.

Lower Colorado.—The drainage within the United States of (a) the Colorado River below the Lee Ferry Compact Point which is about 1 mile below the mouth of the Paria River; (b) the Rios Yaqui, Magdalena, and Sonoita and other lesser streams that ultimately discharge into the Gulf of California; and (c) the Animas Valley, Wilcox Playa, El Dorado Valley, and other smaller closed basins.

Great Basin.—The drainage of the Great Basin that ultimately discharges into the States of Utah and Nevada.

Columbia-North Pacific.—The drainage within the United States that ultimately discharges into (a) the Straits of Georgia and of Juan de Fuca; (b) the Pacific Ocean, whose point of discharge is within the States of Washington and Oregon, including the Columbia River; and (c) the Great Basin in the State of Oregon.

California-South Pacific.—The drainage within the United States that ultimately discharges into (a) the Pacific Ocean, whose point of discharge is within the State of California, which includes the Central Valley; and (b) that portion of the Great Basin, and other closed basins, in the State of California.

Alaska.—The drainage within the State of Alaska.

Hawaii.—The drainage within the State of Hawaii.

DATA COLLECTED BUT NOT PUBLISHED

The two general types of data included in this survey which have been suppressed because of either poor response rate or related problems are as follows: (1) An inquiry on the quantity of intake water transferred to manufacturing establishments from other water users by means of piping or canals, etc.; and (2) an inquiry designed to measure water quality (BOD, oil and grease, suspended solids, metals, nutrients, and thermal) at final discharge both before and after treatment. Water quality information was also requested for intake water before treatment for BOD, suspended solids, and thermal.

	1954..	21	16	5	(¹)	24	21	6	15	66

- Represents zero. (D) Withheld to avoid disclosing the operations of individual companies. (Z) Less than 500 million gallons.

¹For 1968 and prior years, salt water is included in brackish water.²Excludes establishments classified in SIC Major Groups 23 and 27.³Represents employees in 1972, in establishments consuming 20 million gallons of water or more.⁴Includes establishments classified in SIC Major Groups 23 and 27. In 1959, such establishments had total water intake of 23 billion gallons, gross water use of 58 billion gallons, discharge of 22 billion gallons, and 152 thousand employees.⁵Because of changes in definitions included in the 1972 Standard Industrial Classification Manual, data for previous periods for Major Groups 30 and 34 are not comparable with those for 1973 and have, therefore, been suppressed. However, these figures are included in the U.S. totals.

This is a detailed map of Missouri, showing its county boundaries and names. The map is oriented with the top to the left. It is color-coded into three main regions: RED (northwest), RAINY (central), and NE (east). The map also shows major cities and the state boundary with a thick black line. The map is oriented with the top to the left.

Note: Figures shown for industry groups (3-digit) and major groups (2-digit) include data for all component industries whether or not separate figures are shown for individual industries in the group.

- Represents less than .05. (D) Withheld to avoid disclosing operations of individual companies.

¹Included in total water intake.

²Included in total water discharged.

³Included in expenditures for new treatment plants.

⁴Included in annual cost to operate and maintain existing water treatment plant and equipment.

⁵All industries, except those in SIC Major Group 23, Apparel and Other Textile Products, and 27, Printing and Publishing, were candidates for inclusion in this survey. Specific 4-digit industries in other major groups not listed in this table had no establishments with use of 20 million gallons of water or more in 1973.

TABLE 1B. Selected Water Use Statistics for Geographic Divisions and States: 1973

Geographic division and State	Total establishments ¹ (number)	Establishments reporting consumption of 20 million gallons of water or more				Water intake		Gross water used, including recirculated (billion gallons)	Water discharged		Expenditures for new treatment plants (thousand dollars)	Annual cost to operate and main- tain existing water treatment plant and equipment (thousand dollars)
		Total (number)	Percent of total	Reporting treatment		Total (billion gallons)	Treated prior to use ³ (billion gallons)		Total (billion gallons)	Treated prior to discharge ⁴ (billion gallons)

Note: Figures for industry groups (3-digit) and major groups (2-digit) include data for all component industries whether or not separate figures are shown for individual industries in group.

- Represents less than .05. (D) Withheld to avoid disclosing operations of individual companies.

¹Represents gross water used minus intake water.

²Industries which had no establishments recirculating water have been omitted. Also, see footnote 4, table 1A.

TABLE 5A. Gross Water Used, Including Recirculated, Total Water Intake, and Treated and Untreated Water Discharged, by Point of Discharge, for Industry Groups and Industries: 1973

Note: Figures for industry groups (3-digit) and major groups (2-digit) include data for all component industries whether or not separate figures are shown for individual industries in group.

- Represents less than .05. (D) Withheld to avoid disclosing the operations of individual companies.

¹Establishments with two or more methods of treating recirculated water are counted as one establishment.

²Industries which had no establishments treating recirculated water have been omitted. Also, see footnote 4, table 1A.

EXPLANATORY TEXT

GENERAL

This report supplements the 1972 Census of Manufactures data shown for SIC Major Group 22, Textile Mill Products, in the industry reports series. The data included in this report were collected in an independent survey through a mail canvass on Census Form MC-22Z, Textile Machinery in Place as of December 31, 1973, as part of the Census of Manufactures for 1972.

SCOPE OF SURVEY

The manufacturing establishments reporting in this survey are defined as a single physical location where manufacturing operations are performed (e.g., a factory, mill, or plant). They were selected from the 1972 Census of Manufactures mailing panel for specific textile industries as defined and structured in the 1972 edition of the Standard Industrial Classification (SIC) Manual, published by the Office of Management and Budget, Executive Office of the President. The specific industries included cover the major textile operations, as follows: Yarn spinning (SIC 2281 and 2283), yarn texturing and throwing (SIC 2282), weaving (SIC 2211, 2221, and 2231), knitting (SIC 2251, 2252, 2253, 2254, 2257, 2258, and 2259), yarn and fabric finishing (SIC 2261, 2262, and 2269), tire cord and tire cord fabric (SIC 2296), and carpet and rugs (SIC 2271, 2272, and 2279). Since a portion of textured yarn is also produced by chemical companies manufacturing filament yarn (SIC 2823 and 2824), respondents were also selected from these operations. However, the machinery in place at narrow fabric mills (SIC 2241), coated fabric plants (SIC 2295), and nonwoven fabric mills (SIC 2297) were excluded from this survey.

METHOD OF OPERATION

The textile industries are characterized by several major types of business activities: Manufacturers, contractors, jobbers, converters, wholesalers, and piece-goods dealers.

The "manufacturer" purchases materials, employs production workers in his own plant to produce the product, and sells the product; in effect, this establishment performs all of the usual manufacturing functions.

The "contractor" employs production workers in his own establishment to process materials owned by other companies (independent contractors) or supplied by other establishments of the same company (multiplant company contractor),

makes products to specification, and is not involved in the sale of the finished product.

The "jobber", "converter", "wholesaler", and "piece-goods dealer" primarily perform only the entrepreneurial functions of the textile business, such as buying raw materials, designing and preparing samples, arranging for the manufacture of his product from his own materials with contractors, and marketing the finished product.

The reporting establishments were asked to indicate their type of business (manufacturer, contractor, or jobber) and the kinds of operations (spinning, weaving, etc.) performed at each manufacturing location. Since there is a large degree of integrated or vertical operations within the establishments in the textile industries, each respondent received a complete copy of the report form including all machinery descriptions collected in this report. This gave the respondent the opportunity to report the machinery in place for all operations performed at his plant location. The information concerning the type of business and kind of operation of the respondent was then cross-checked against the type of machinery reported by that respondent to ensure a complete and full report from each reporting unit. Basically, the majority of the machinery-in-place data shown in this report are located at manufacturing and contracting establishments. However, only the jobbers within the knitting industries were mailed report forms since they are considered within the scope of the census of manufactures. All other jobbers, wholesalers, converters, and piece-goods dealers were excluded from the mailing panel of this survey.

All respondents were asked to report the number of machines in place. For the purpose of this report, "in place" includes all machinery set up in operating positions even though the machinery may have been idle on December 31, 1973. In addition, the respondents were also asked to include sample machinery.

SURVEY COVERAGE

As a means of evaluating the coverage of this information, the employment figures for those establishments responding to our survey were tabulated by four-digit SIC industries in which the responding establishments are classified. The total employment figure of the reporting establishments of each four-digit SIC industry was then compared to the total employment figure of the respective four-digit SIC industry as shown in the 1972 Census of Manufactures preliminary industry reports. The figures presented in this report are simple aggregates of reported data from companies representing approximately 90

EXPLANATORY TEXT—Continued

percent of total employment in the industries covered by this survey. The reporting percentage shown above may be slightly higher or lower in some cases as a result of plants that were out of scope of this survey or out of business and had sold or dismantled their equipment during 1973. These plants were counted as reporting establishments, and their employment data were used in the computation of the reporting percentage. Also, an attempt was made to contact any known successors to the plants that went out of business during 1973. Conversely, several multiplant companies had new plants come into business during 1973 and they were reported to us. Although the data for the successor establishments and new plants are included in the tables, they had no employees in 1972 and, therefore, could not be included in the reporting percentage.

COMPARABLE CURRENT INDUSTRIAL REPORTS SERIES DATA

The data for selected types of machinery in place are also collected in the Current Industrial Reports (CIR) series of the

Census Bureau. The comparable figures from selected CIR series are shown and each table is footnoted, where applicable, to indicate the appropriate CIR series containing the comparable machinery-in-place data.

Although excluded from this survey, the number of machines in place at narrow fabric mills (SIC 2241) are available in Current Industrial Reports, annual series, MA-22G, Narrow Fabrics.

COMPARABLE PRIOR CENSUS OF MANUFACTURES DATA

Similar textile machinery-in-place data were shown in previous census of manufactures publications. Volume II, Industry Statistics, Part 1, Major Groups 20 to 28 of the 1963 and the 1958 censuses of manufactures included textile machinery-in-place data for selected years between 1954 and 1965. Where applicable, selected comparable figures from these publications are shown in the tables of this report.

Note: Cotton system spindles in place are collected on a monthly basis and published in Current Industrial Reports, series M22P, Cotton, Manmade Fiber Staple, and Linters.

(NA) Not available.

¹The figures presented in this table are simple aggregates of reported data from companies representing approximately 90 percent of total employment in the industries covered by this survey.

²The term "cotton system spinning spindles" does not include spindles operated on the "American" and other new systems for spinning uncut top. (See Table 2A, Woolen, Worsted, and Synthetic Machinery in Place: December 31, 1973 and 1969.)

³Includes ring spindles 3 1/2 inches and smaller.

⁴Includes ring spindles 3 9/16 inches and larger.

⁵Includes up-twisters of either the conventional or 2-for-1 type.

⁶A number of plants reporting the production of throw yarn doubling and twisting spindles rather than throwing spindles.

⁷The 1954 data for high-speed warpers appear to have been overstated. However, the material needed to correct this information was not available.

Note: Broad-fabric weaving looms in place are collected on a quarterly basis and published in Current Industrial Reports, series MQ-22T.1, Cotton Broadwoven Gray Goods; MQ-22T.2, Manmade Fiber Broadwoven Gray Goods; MQ-22T.3, Wool Broadwoven Goods; and MQ-22T.4, Tire Cord and Tire Cord Fabrics.

- Represents zero. (D) Withheld to avoid disclosure of figures for individual companies.

¹Represents the maximum width that can be woven (width at take-off point) and not the finished width of the fabric. Narrow-fabric looms (12 inches or smaller) are not included.

²The figures presented in this column are simple aggregates of reported data from companies representing approximately 90 percent of total employment in the industries covered by this survey.

TABLE 5A. Knitting Machinery in Place, by Type of Machine: December 31, 1973

Type of machinery	Total number in place at end of year ¹	Type of machinery	Total number in place at end of year ¹
Weft knitting machinery--garments, trims, collars: ²		Weft knitting machinery--yard goods--Continued	
Flat bar:		Double-knit cylinder and dial machines: ⁶	
V-bed flat latch needle.....	4,486	No pattern mechanism.....	3,712
Flat-bed purl, or links and links.....	1,592	Fixed selection, including patterns limited to one machine revolution.....	1,864
Multisection spring needle full fashioning.....	747	Patterning devise, mechanical and electronic ⁷	10,014
		Purl, or links and links.....	490
Circular garment length (cylinder and dial, purl or links) ³ ..	6,430		
Circular headwear and other small diameter machines ⁴	4,234	Warp knitting machinery: ²	
		Tricot (spring beard, latch, and compound needle).....	5,537
Weft knitting machinery--yard goods: ^{2 5}		Kettenraschel (cut presser).....	83
Circular open top latch needle machines:		Simplex.....	241
Plain, multiple track, and patterned jersey.....	9,043	Weft insertion, all types.....	38
Sliver knit.....	836	Raschel (latch, compound).....	2,852
		Raschel-crochet (Cidega, Eppler, Kohler, Sander, and Graf types).....	514
Circular spring needle machines.....	5,219	Milanese:	
Cylinder and dial machines:		Flat bed.....	} (D)
Interlock.....	4,712	Circular.....	
Rib body size underwear machines.....	5,889	Loop bonding (knit stitch).....	

Note: Knitting machinery in place are collected on a quarterly basis and published in Current Industrial Reports, series MQ-22K, Knit Fabric Production.

(D) Withheld to avoid disclosure of figures for individual companies.

¹The figures presented in this table are simple aggregates of reported data from companies representing approximately 90 percent of total employment in the industries covered by this survey.

²Excludes hosiery and knit-deknit.

³Includes all machines producing body lengths with attached rib trim and draw thread course.⁴Excludes hosiery.

⁵Includes weft knitting machines producing outerwear, underwear, and industrial fabrics (including home furnishings).

⁶Excludes interlock.
